

Contenidor amb Prestashop

Utilitzant Docker-compose, realitza la instal·lació de la plataforma Prestashop. El fitxer de docker-compose haurà de constar de dos serveis (mysql i prestashop) que compartiran la mateixa network (presta_net).

```
version: '3'

services:
  mysql:
    image: mysql:5.7
    volumes:
      - mysql_data:/var/lib/mysql
    environment:
      MYSQL_ROOT_PASSWORD: example_root_password
      MYSQL_DATABASE: prestashop
      MYSQL_USER: prestashop_user
      MYSQL_PASSWORD: prestashop_password
    networks:
      - presta_net

  init_db:
    image: mysql:5.7
    volumes:
      - ./init.sql:/docker-entrypoint-initdb.d/init.sql
    environment:
      MYSQL_ROOT_PASSWORD: example_root_password
      MYSQL_DATABASE: prestashop
      MYSQL_USER: prestashop_user
      MYSQL_PASSWORD: prestashop_password
    networks:
      - presta_net
    depends_on:
      - mysql

  prestashop:
    image: prestashop/prestashop
    volumes:
      - prestashop_data:/var/www/html
    environment:
      DB_SERVER: mysql
      DB_NAME: prestashop
      DB_USER: prestashop_user
      DB_PASSWD: prestashop_password
    ports:
      - "8080:80"
    depends_on:
      - init_db
    networks:
      - presta_net
```

```
networks:
  presta_net:
    driver: bridge

volumes:
  mysql_data:
  prestashop_data:
```

```
marcab@a218pc07:~/Escriptori/Contenidor$ sudo docker-compose up -d
Creating network "contenidor_presta_net" with driver "bridge"
Creating contenidor_mysql_1 ... done
Creating contenidor_init_db_1 ... done
Creating contenidor_prestashop_1 ... done
```
